BioOne 2.5 Gallon & Auto-Injection System

Microbial Inoculant For Drain Line, Septic Tanks, and Grease Traps.

BioOne 2.5 gallon is ideal for commercial applications. Using the BioOne auto injection system can eliminate costly grease trap related problems which cause slow and stopped drains. The system automatically meters the correct amount of BioOne to keep drain lines flowing and improve grease trap efficiency.

Live vegetative bacteria are injected via the preprogrammed auto-injection system. Once BioOne is in the drain lines and grease trap the friendly bacteria take over, immediately consuming oil, grease and organic matter. Unlike other products that emulsify grease and oil, BioOne literally consumes it - converting the food wastes into carbon dioxide and water. BioOne is the most effective microbial drain treatment available. BioOne contains no soaps, no harsh chemicals, no premixing and no waiting. The BioOne auto-injection system is safe, simple and dependable - just start it up, load it up, and forget about it.

BioOne eliminates build-up such as hair, soap scum and grease that slow down and clog drains and the insides of pipes. The friendly bacteria eat their way through the waste eliminating the problem. Through natural biological digestion, waste build-up in drains is eliminated.

When should I use BioOne?

Neglecting your waste system is a common and costly mistake that many people make. Start using BioOne NOW and continue using it periodically to ensure pipes and waste systems are kept clean and efficient. Commercial users can rely on the BioOne injection system to keep pipes clear and trouble-free.
