BioOne 64 oz.

Microbial Inoculant For Drain Line, Septic Tanks, and Grease Traps.

BioOne 64 oz. is perfect for residential use. Its premeasured cap makes using BioOne easy for residential drainlines and septic systems when used in conjunction with manual drain cleaning. BioOne eliminates call backs. The active microbes colonize in the drainline and eat the gook and slime the cable leaves behind.

BioOne eliminates build-up such as hair, soap scum and grease that slow down and clog drains and the insides of pipes. The friendly bacteria eat their way through the waste eliminating the problem. Through natural biological digestion, waste buildup in drains is eliminated.

Why should I choose BioOne?

BioOne is economical and safe for the environment - eliminating grease and food waste-related plumbing problems. BioOne is so powerful it's patented. Patented protection against pipe build-up, clogs and costly messes. BioOne is an affordable, all natural, friendly bacteria - unlike caustic additives that hurt the environment and don't guard against reoccurring problems. Dangerous caustic openers do very little to scum build-up and lose effectiveness the further they travel down a pipe.

When should I use BioOne?

Neglecting your waste system is a common and costly mistake that many people make. Start using BioOne NOW and continue using it periodically to ensure pipes and waste systems are kept clean and efficient. Commercial users can rely on the BioOne injection system to keep pipes clear and trouble-free.
